STEAM AND HOT WATER HEATERS. Richardson & Morgan Co. 92 Beekman St.
See adv. pages 38 & 39 Pink Sheets Back of Book.

JOHN MORGAN,

MANUFACTURER OF

SUPERIOR MINERAL WATERS

takes pleasure in calling attention to the following communication from PROF. CHANDLER, late President of the Board of Health of New York City:

"The bearer, Mr. GEORGE O. STOUT, is making for me analysis of water in use in Mineral water in the city for the manufacture of Mineral waters. Please furnish him with a sample of the water used by you, and oblige

C. F. CHANDLER, President Board of Health."

Having complied with the above request, and as a result of the analysis of the water submitted, I received the following communication:

CHEMICAL LABORATORY, Columbia College.

"I have analyzed the sample of water which I took personally from your place, with the following results:

Mineral salts,	5.89 grs. per U. S. gallon.
Organic and volatile matter,	0.4 " " "
Free Ammonia,	0.4 parts per million.
Albuminoid Ammonia,	0.11 " " "

At the time I made the above analysis I also made the following analysis of Croton water, drawn directly from the taps of the School of Mines:

Mineral salts,	5.3 grs. per U. S. gallon.
Organic and volatile matter,	0.5 " " "
Free Ammonia,	0.06 parts per million.
Albuminoid,	0.11 " " "

Respectfully, GEORGE C. STOUT, Ph.B."

Further analysis to ascertain the purity of the water brought forth the following gratifying results:

COLUMBIA COLLEGE, Chemical Society.

"JOHN MORGAN, Esq.: The sample of water submitted to me contains the following:

Total solid residue,	2.21 grains.
Organic Probable matter,	0.59 grains per U. S. gallon of 231 cubic inches.
Free Ammonia,	0.07 parts per million.
Albuminoid,	0.11 " " "

Yours respectfully, MARK HARGRAVE, Chemist."

The manufacturer desires to draw attention to a few simple rules, the observance of which will secure to purchaser the best results of this water.

1. Siphons when first delivered, should be left on ice.

2. When left in the refrigerator there should be a space between the ice and the Siphon.

3. Occasionally should be shaken to keep the water thoroughly mixed, before pressing the Siphons on ice, as a sudden change of temperature frequently tends to breakage of the Siphons.

Respectfully yours,

JOHN MORGAN,

343 to 347 W. 39th St., 342 & 344 W. 40th St.,

and 333 to 339 W. 41st Street.
